Unemployment in the regions

Synthetic data, for training only

Labour statistics team

2026-10-29

Summary

Unemployment **fell** in most regions between 2022 and 2025. *Jazan* is the exception. This note shows the national trend and the latest rates.[1] The data cover:

- 13 regions and the Kingdom as a whole
- 16 quarters, from 2022 Q1 to 2025 Q4

Official figures are on the GASTAT website.

Method

The unemployment rate is

$$u = \frac{U}{U + E} \times 100$$

where U is the number unemployed and E the number employed.
